SUMMARY

Full-stack engineer with 8+ years designing, building, and shipping production web applications for a SaaS business. Specializes in payments, billing, and efficiency solutions — created an in-house invoicing and payments platform processing ~\$9M/year and an automated QuickBooks reconciliation pipeline. Works across the stack — React front-ends, PHP/Node.js back-ends on AWS, and third-party API integrations — and uses AI-assisted development tools to ship faster.

TECHNICAL SKILLS

Languages: JavaScript, PHP, SQL, GDScript, HTML, CSS

Frontend: React, Tailwind CSS, responsive/mobile-first design

Backend: Node.js, PHP, REST API design, webhooks, cronjob

Data: MySQL, MariaDB

Cloud & DevOps: AWS (EC2), PM2, Docker, Git/GitHub

Integrations: Stripe, PayPal Payflow, QuickBooks API, SendGrid, Mailchimp

EXPERIENCE

Full-Stack Engineer — Land F/X

2021 – Present

- Created a front and backend purchase system with OOP that is secure and PCI compliant with a custom invoicing platform **processing \$9M annually, saving 1% yearly revenue** over off-the-shelf processing systems. Reduced sales and accounting friction — **eliminating 3 manual tasks per transaction** and cutting customer product delivery from a 2-day wait to instant.
- Engineered an automated pipeline that syncs payments, invoices, and clients into QuickBooks in real time, replacing all manual entry — **saving 30 hours/week**, reducing errors, and producing clean, report-ready data for management.
- Discovered a major sales-tax compliance blindspot and remediated it via an automated sales-tax API plus nexus-tracking compliance software, **mitigating exposure worth 4% of yearly revenue**.
- Owned the trial intake-form and \$50K/year in Google Ads. Improved trial conversion with form UI choices, keyword-targeted lead-generation landing pages, and ROI/attribution tracking. In two years: cut cost per trial 41%, **increased trial leads 88%**, and **grew final trial-to-sale conversions 47%** with higher quality leads.
- Contributed heavily to the company website strategy and designed all landing pages.
- Developed an automated report on OEM sales data **saving ~40 hours/quarter** of CFO work.

Web Developer — Land F/X

2017 – 2020

- Redesigned the website to be responsive and solidified the brand. Improved the company's support UX and customer retention with improved searchability for training videos and documentation.
- Managed and designed website sale promotions and email marketing campaigns.
- Built "30 Day Challenge," a gamified web learning module within the software, adopted into Virginia Tech's Landscape Architecture program.
- Developed and shipped the Land F/X companion mobile app (App Store + Google Play) with PHP webhooks for content refresh and push notifications.

IT & Web Design — Skinny Kitchen

2016 – 2017

- Designed and secured the company website and improved performance, speed, and SEO — **growing traffic from 2,000 to 10,000 daily unique visitors**.

PROJECTS

Rift Jumpers — Co-Creator & Backend / Systems Engineer

Multiplayer game, currently in Beta

- Co-created a real-time multiplayer game in Godot, designing and developing much of the core gameplay.
- Created the AWS EC2 hosted auth system, user-management, multiple simultaneous lobbies with open random or invite-code hosted games, achievement statistics and multiplayer backend using an authoritative master game engine with RPC calls to keep players in sync and prevent cheating.

EDUCATION

California Polytechnic State University, San Luis Obispo — Bachelor's Degree, conferred 2017
